

# SERIES III CEILING LOUDSPEAKERS

**KSI's Series III high fidelity ceiling loudspeakers** are simply the finest available for 2x2 ceiling grid installations. From our 12-1C subwoofer to our best selling 8081-CS, **KSI Series III high fidelity ceiling loudspeakers** give you a wide range of choices for lecture halls, conference rooms, audio visual theaters, restaurants, and any installation demanding superb sound quality with pleasing architectural appearance.

Our 6.5" and 8" bass mid transducers offer smooth midrange performance with powerful bass response through the use of our optimally tuned passive radiators. High frequencies are handled by our 1" pure titanium dome transducers or our 26mm horn loaded fabric dome transducers. These components provide outstanding clarity and coherence along with very wide frequency response and high power capacity. **KSI** backboxes are built to be "quiet" when used in open ceilings with no partitions, essential in noise sensitive environments.

All **KSI ceiling loudspeakers** are also optionally available constructed from Class 1 fire rated cabinet material to meet the strict building codes for fire retardation, and for those special installations, all products are available in custom formats to suit your requirements.

When your applications require versatility and high performance, all in a quality, cost effective and ready to install products, **KSI Series III ceiling loudspeakers** are your best value.
