

SERIES III NEAR FIELD LOUDSPEAKERS

KSI's Series III Near Field Loudspeakers have been developed to meet the demands of today's digital technology. Sharing the same components as our wall and ceiling mount loudspeakers enable them to be used in perfect unison with each other for tremendous versatility on conference rooms, audio visual theaters and any installation demanding superb sound quality and high performance.

Our bass mid transducers offer smooth midrange performance with powerful bass response through the use of our optimally tuned passive radiators. Our 1" pure titanium dome tweeters and 25mm fabric dome horn tweeters produce smooth extended high frequency response with outstanding clarity and coherence. This combination of components gives you very wide frequency response and high power capacity. To further enhance low frequency reproduction of special effects, **KSI's** low frequency loudspeaker systems are the perfect choice.

As an option, all **KSI** near field loudspeakers are available in a white lacquer finish. Wall mount brackets make mounting to walls and ceilings quick and efficient.

KSI Series III Near Field Loudspeakers are a tremendous value, surpassed only by our own reference monitor loudspeakers.
