

SERIES III WALL MOUNT LOUDSPEAKERS

KSI's Series III High Fidelity Wall Mount Loudspeakers offer traditional **KSI** performance, all in an easy to install package. Our 501-WM, 601-WM and 801-WM series are designed to quickly mount with only a screwdriver in existing flat substrates up to 2" thick. The 501-WMBB through 81-1WMBB feature sealed backboxes yielding the same high performance as our near field and ceiling mount loudspeakers. Backboxes mount in either 2x4 or 2x6 wall cavities on 16" on center. Only the grill is visible when installed, assuring a highly finished appearance.

All bass mid transducers offer smooth midrange performance with powerful bass response. High frequencies are handled by either our 1" pure titanium dome or 26mm horn loaded fabric dome transducers. These components provide very smooth frequency response with outstanding clarity and high power capacity.

All **KSI** wall mount models with backboxes are optionally available with Class 1 fire rated cabinet material, and a large assortment of custom grill colors and patterns that will enhance any environment.

When you require high end wall mount loudspeakers, whether for a conference or a high end home, **KSI Series III Wall Mount Loudspeakers** are your best value.
